

*"Instead of a child being out of the classroom for 15-20 minutes while I screen them the whole class was screened in that amount of time. The results were far more accurate and caught diagnoses that I would not have caught. The parents respond better also. The area doctors liked the reports and were impressed with the accuracy."*

### Time Savings

Did the VisioCheck program delivery save you time in your vision screening efforts?

Given the overall demands of your time as a school nurse, how would you rate the importance of time saving activities for you?

4.9 out of 5 (extremely important)

*"I have over 800 students and see over 100 per day and it is a real struggle to get the mandatory screenings done. The screenings that were done here were far more accurate than the screenings I do. I was really happy with the outcome."*

*"School nurses are often the primary (and sometimes only) health care provider school aged children see...The time we have to assess and care for children is very limited on the best of days. Anything that allows us to save time on routine issues (screenings for example) gives us more time for the care of acute and chronic health issues."*

### Program Quality & Effectiveness

How would you rate the onsite VisioCheck program delivery at your school(s)?

How would you rate the value of the screening summary reports that were included with your results?

4.9 out of 5 (excellent)

4.9 out of 5 (extremely useful)

*"Our teachers appreciated less classroom interruptions. I think parents responded or acted on the printed color result sheet. They were more likely to follow through with eye doctor appointment."*

*"I felt the program provided a much more accurate screening than what I can provide using a Snellen chart."*

*"Tracking and referrals are so much easier, stats were very helpful in looking at our numbers and other demographics."*

*"Parents and area doctors loved the reports. I got faster response from parents."*

### Impact & Importance

Do you believe improving vision outcomes for students can have an impact on educational performance?

*"The technology available through screenings like that done by Conexus is invaluable. Vision problems that go undetected can cause learning and behavior issues that negatively impact school aged children's ability to be academically successful. While chart screenings are certainly better than no screening at all, it would be a disservice and failure of our Commonwealth for children to have the technology available yet not utilized."*

100% YES

Do you believe any health condition that affects 25% or more of your student population should be elevated as a priority?  
*(of those with an opinion)*

*"I think this screening caught more problems that I would not have gotten on our screening. Some children that are not cognitively able to screen with our machine were able to be screened for the first time."*

In your professional opinion as a school nurse, please rate the value of updating chart screenings with technology based programs.

*"Children who cannot clearly see their books, papers, computers or work displayed on Promethian or chalk boards cannot learn. That is a point that cannot be argued against."*

4.8 out of 5 (extremely important)

*"If 25% of our children had a communicable illness we could call it a Pandemic and everyone would be on high alert with every possible thing being done to stem and correct the problem. Why don't we treat vision problems with the same urgency?"*
